Providing customer safety through product traceability

Smart software solutions

Providing customer safety through product traceability

Take the proactive approach to reduce the occurrence of low product quality, rework, and downtime with Atlas Copco's cutting-edge software solutions that enhance your existing line. Our solutions help to ensure your production is operationally sound and running smoothly with enhanced **traceability, error-proofing, optimization**, and more!

No matter your assembly needs, Atlas Copco has the software for you. Industry 4.0 has brought many changes, but you can stay on top of these transformations with Smart Connected Assembly solutions. Our software platforms such as ToolsNet 8, ToolsTalk2, and Scalable Quality Solution (SQS) are designed to optimize traceability, allowing manufacturers to identify the root cause of an issue, assess the reach of a potential quality leak, and quickly deploy a corrective action and prevention strategy more swiftly and effectively.

ToolsNet 8

- **Collect, analyze, and optimize.** This is an industry leading, configurable software that aims to simplify the production process by collecting and analyzing data. The tightening process on your assembly line should be monitored, documented, analyzed, and improved regularly so that you can continuously enhance your processes and ensure a high level of quality and reliability. Take control of your assembly while reducing rework and ensuring maximum uptime.

ToolsTalk 2

- **The center of all configurations.** Take line management to the next level with a software solution that is easily configured while providing complete visibility and traceability to your entire line structure. Customized to fit your unique needs, this software delivers improved uptime, productivity, and a reduction in defects and rework.

Scalable Quality Solution (SQS)

- **Driving quality, process reliability, transparency, and product safety.** This software solution delivers advanced error-proofing to help you achieve zero defects on the line. Ultimately, this reduces the cost of rework and scrapping as well as provides quality assurance. SQS can handle anything from a single station to an entire plant wide solution while still ensuring product quality, process reliability, and transparency.
