

POWER FOCUS 6000 AND TENSOR STR

Reinventing tightening

Atlas Copco

REINVENTING TIGHTENING

This all new fastening solution from Atlas Copco takes productivity, ergonomics, quality and environmental impact to entirely new levels. And all this with the most user-friendly experience ever.

Enjoy the benefits of a system providing a unique operator experience, with superior quality control and the most flexible integration. The Power Focus 6000 and Tensor STR is the perfect option for your safety critical assembly processes!

POWER FOCUS 6000 – designed to deliver

Supporting handheld and fixtured tools, the Power Focus 6000 is designed to make everyday production easier and more efficient.

TENSOR STR – Innovative and optimized

High-end performance in every detail. The brand new design and motor makes the Tensor STR more ergonomic and faster than ever before. The modular design will allow you to reduce your spare part inventory.

Main new features

Virtual Station

Common Controller

IAM - Intelligent Application Module

Tensor STR

Two Trigger Tool

Turbo Tight

True Angle

Easy Configuration

VIRTUAL STATIONS

Control and overview with Virtual Stations

The Virtual Station is the enabler of your assembly. It controls the tool, the communication and the accessories in your assembly station.

Controlling multiple tools, working with virtual station gives you less cable management, less network connections and less hardware components. You will gain increased flexibility with increased rebalancing speed in your production. Using less hardware will save you up to 80% power consumption – great news for the environment!

A top notch process and multiple accessories

The Virtual Station keeps all information about your assembly process, giving you an instant overview of what is going on in the production.

TOOL CONTROL:
Making sure your tool is performing correct tightenings for your assembly.

- » Pset selection
- » VIN handling
- » Batch sequence control

COMMUNICATION CONTROL:
Communicating for easy and seamless integration with your production systems.

- » Open Protocol
- » Fieldbus
- » Customer Protocols

ACCESSORY CONTROL:
Taking care of multiple accessories per virtual station.

- » Stacklight
- » Socket selector
- » Digital I/O

POWER FOCUS 6000

One Controller

The Power Focus 6000 increases your flexibility in rebalancing assembly lines. Now you are able to connect up to 6 tools to the same controller. Giving you a simpler installation with less cables, hardware components and network connections. Add to that the lower power consumption, less floor space utilization and a much lower environmental footprint, the benefits are obvious.

One Platform

One platform for handheld and fixtured tools. The Power Focus 6000 reduces your inventory costs and training requirements. Easy to connect and configure back up tools, using the same programming interface. And the Power Focus 6000 will be your common controller for all tools and needs.

IAM – Intelligent Application Module

Intelligence in the palm of your hand. Software, tightening data and configuration – carry all important information with you in a future proof portable module. Easy to upgrade and stable with a rapid back-up function. Two software areas allow for smart software management. Allowing a much safer upgrade process, always giving the possibility to switch between two software versions.

Supported Tools

The Common Controller supports the Tensor STR, Tensor SR, Tensor ST, Tensor STB and ST10 REVO.

EASY CONFIGURATION

Easy and powerful configuration

Power Focus 6000 is easily configured either direct on the large touch screen, or by the web HMI. Simply type the IP address of your Power Focus 6000 in a web browser to access the Web HMI. Remote access in an instant.

The next optimized generation

Atlas Copco has developed the next generation Tools Talk 2, to manage larger installation of controllers. The graphic programming interface guides you through the optimization of your configuration.

Both ToolsTalk 2 and the Web HMI have been developed by Atlas Copco's User Experience Designers, securing a truly easy and intuitive user interface.

TURBOTIGHT®

TRUEANGLE®

TurboTight® is a new and revolutionary tightening strategy.

For a truly unique operator experience TurboTight® lets the tool absorb the reaction force and significantly improves ergonomics for the operator. Shorten cycle times and at the same time improving flexibility. Less hardware means less maintenance. And if you're doing 200 tightenings a day that makes the world of a difference.

Increase your quality with TrueAngle®

Eliminating operator influence, TrueAngle® uses a gyro signal to read operator movement, increasing the accuracy of your angle reading. Enabling handheld angle controlled tightenings while removing operator influence. This allows you to narrow down your angle window, and detect the most common assembly problems such as wrong or missing components and damaged threads. Avoid premature shut-offs and detect re-hits. All this will increase your quality and lower costs connected to scrapping and rework.

TENSOR STR

Higher productivity with better quality

Meeting your tightening needs with a higher performance and better control than ever. With a strong focus on ergonomics, Tensor STR is giving you better heat dissipation keeping the tool cooler, and higher speed thanks to the new Tensor motor.

Operator productivity is increased thanks to dual accessories capability. You can now connect and power two accessories on the same tool. Inventory for spares and back up tools is reduced

since the modular components that build the base in the Tensor STR tool range are interchangeable between models and sizes. IP54 classifications secures that unwanted particles do not enter into the tool, giving a general increase in robustness and reliability.

Get improved ergonomics, time saving and quality by combining the Tensor STR with The Power Focus 6000 and obtain a new state of the art tightening strategy – TurboTight®.

ETT TWO TRIGGER TOOL

Cycle time savings when two become one!

One-hand applications, traditionally tightened with pulse tools, are now possible thanks to the upper trigger. Tightening with one tool compared to two tools, shortens cycle time and eliminates unnecessary work steps.

Accurate and reliable, the Tensor STR Two Trigger Tool has a market leading accuracy, thanks to its innovative placement of the transducer. Increasing accuracy to 2,5%. This increases process reliability, minimizing risk for recall and reducing assembly problems.

- 1 Pre-tighten with the upper trigger.
- 2 Tighten to target torque with the lower trigger.
